END-TO-END SOLUTIONS

ASSESSMENT

Independent review of your QA and development processes

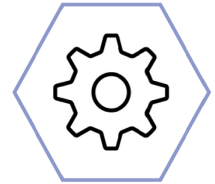

INSIGHT

Provides actionable intelligence to increase project quality

CONSULTANCY

A Prolifics Testing Principal Consultant individually reviews your process

COST SAVINGS

Improve testing and product quality while managing development costs

The Prolifics Testing Software Testing Health Check

Our Software Testing Health Check examines the effectiveness of your test process to help ensure that projects are delivered on time, with confidence. Based on our extensive test process improvement experience, we conduct audits and assessments to provide rapid, actionable intelligence for increasing the quality of software projects within your organisation.

Health Check Features

A Principal Consultant reviews the current development and testing processes in place at your organisation, including:

- QA methods and processes
- Documentation, templates, and standards
- Defect tracking, metrics, and test repositories
- Testing tools: management, automation, and performance
- Test team structure and skills
- All relevant test phases
- Test and release frequency
- Scope of testing
- Development process, whether agile, waterfall, or V-model
- Historical defects not found and root causes
- TPI maturity level

On completion, Prolifics Testing present a report of findings, including prioritised recommendations on areas for improvement with suggested fixes. The health check provides an independent review of QA processes, the results of which are delivered as actionable suggestions for improvements.

We have successfully assisted many organisations with improving their testing procedures, ultimately enabling them to deliver projects as planned, on time and within budget.

Can My Business Benefit?

The impact of failed projects can be damaging and lasting. Organisations recognise the growing importance of rigorous testing and its effects on application quality, yet this activity must remain within budgets that are notoriously thin. A Prolifics Testing Software Testing Health Check is beneficial if you find that:

- Your testing efforts require long-term financial savings
- Current testing is not making enough impact on quality
- Testing scope needs to be increased under restricted costs
- You need to deliver ideas for improvement quickly
